1 INTRODUCTION

This appendix provides technical data and figures related to the assessment of intersection and freeway delays for the San Jose to Merced Project Section.

It should be noted that Senate Bill (SB) 743 was signed into law on September 27, 2013, the transportation impact analysis under the California Environmental Quality Act (CEQA) shifted away from auto delay toward consideration of greenhouse gas reductions, with a focus on multimodal transportation networks and land use mixes. Vehicle Miles Traveled (VMT) was chosen as the new metric for evaluating transportation impacts under CEQA. SB 743 does not prevent counties or cities from continuing existing transportation impact analyses, including use of vehicular LOS in their general plans, but for CEQA analysis, lead agencies are required to shift to a VMT metric by July 1, 2020. Therefore, intersection and freeway LOS was not considered for CEQA impacts.

However, since the environmental document is a combined document for the purposes of both CEQA as well as the federal National Environmental Policy Act (NEPA), intersection and freeway delays were evaluated to determine project effects under NEPA and this appendix provides the technical data supporting that analysis.

2 FREEWAY MAINLINE SEGMENT OPERATIONS

Freeway levels-of-service (LOS) operations were evaluated. Freeway segments that would serve 100 or more project-generated trips in either the AM or PM peak hour were analyzed. Analysts assessed both freeway mainline segments using the methodologies described in the *Highway Capacity Manual* (Transportation Research Board 2010). Analysts evaluated freeway mainline segments using the method described in Chapter 11 of the *Highway Capacity Manual* (Transportation Research Board 2010). The detailed methodology is presented in Section 3.2.4.3 of the San Jose to Merced Project Section Environmental Impact Report/Environmental Impact Statement.

Analysts identified effects on the freeway system through a two-step process. First, the LOS was determined using the volume to capacity (V/C) ratio, as shown in Table 3.2-7 in Section 3.2.4.3 of the San Jose to Merced Project Section. Then, for freeway segments with LOS E or F (only), the difference in the V/C ratio between the No Project and Plus Project conditions was calculated. An effect was deemed to occur if the project caused the V/C ratio to increase by 0.04 (4 percent) or more.

Freeway operations were studied under the following conditions:

- Existing Conditions
- Existing Plus Project Conditions (effects from permanent road closures and relocations)
- 2029 No Project Conditions
- 2029 Plus Project conditions (effects from permanent road closures and relocations, and Project operations)
- 2040 No Project Conditions
- 2040 Plus Project conditions (effects from permanent road closures and relocations, and Project operations)

3 INTERSECTION OPERATIONS

The operation of intersections is based on various intersection characteristics such as traffic volumes, lane geometry, and signal phasing, which are used to estimate the average control delay experienced by motorists traveling through an intersection. Intersection levels-of-service (LOS) operations were evaluated. Intersections of roadways classified as a collector or above that would be physically modified by the project or would serve 50 or more project trips in either the AM or PM peak hour were analyzed. Analysts evaluated traffic conditions at intersections using the method from Chapter 19 of the *Highway Capacity Manual* (Transportation Research Board 2010). The detailed methodology is presented in Section 3.2.4.3 of the San Jose to Merced Project Section Environmental Impact Report/Environmental Impact Statement.

An effect on signalized intersections was deemed to occur if the Plus Project condition would result in a LOS E or F and an increase in average traffic delay of 4 seconds or more over the No Project condition. An effect on unsignalized intersections was deemed to occur if the Plus Project condition would have a LOS E or F and the project would result in an increase in traffic delay of 5 seconds or more (measured as average delay for all-way stop or worst-movement delay for side-street stop intersection), and if the intersection satisfies one or more traffic signal warrants¹ for at least 1 hour of the day. Five seconds of delay is the increase for unsignalized intersections (rather than the 4 seconds used for signalized intersections) because it only applies to a single movement rather than for the entire intersection, as is the case for signalized intersections.

Intersection operations were studied under the following conditions:

- Existing Conditions
- During construction on Monterey Road (effects due to construction of the narrowing of Monterey Road)
- Existing Plus Project Conditions (effects from permanent road closures and relocations)
- 2029 No Project Conditions
- 2029 Plus Project conditions (effects from permanent road closures and relocations, and Project operations)
- 2040 No Project Conditions
- 2040 Plus Project conditions (effects from permanent road closures and relocations, and Project operations)

¹ Traffic signal warrants define minimum conditions under which signal installation may be justified.

LOS = level of service

SB = southbound

NB = northbound

EB = eastbound

WB = westbound

¹ Affected intersections are shaded in grey.² LOS and delay results are based on changes in roadway capacity and the shifting of traffic from temporary lane closures and relocations during construction.Entries **bolded with an asterisk (*)** identify locations experiencing LOS E or F in one or both peak hours.Shaded entries **bolded with double asterisks (**)** identify locations with project effects per the criteria.

LOS = level of service;

EB = eastbound; SB = southbound; WB = westbound; NB = northbound

SR = State Route

US = U.S. Highway

I = Interstate

Whole intersection average delay reported for signalized intersections. Whole intersection average delay and worst approach delay (in parentheses) reported for unsignalized intersections.

Entries **bolded with an asterisk (*)** identify location experience LOS E or F in one or both peak hours.Shaded entries **bolded with double asterisks (**)** identify locations with project effects per the criteria

Whole intersection average delay reported for signalized intersections. Whole intersection average delay and worst approach delay (in parentheses) reported for unsignalized intersections.

Entries **bolded with an asterisk (*)** identify location experience LOS E or F in one or both peak hours. LOS = level of service; SR = State Route; I- = Interstate

NB = northbound; SB = southbound; EB = eastbound; WB = westbound

SJ = City of San Jose

CT= California Department of Transportation

CMP = Congestion Management Plan

MH = City of Morgan Hill

G = Gilroy; SCCo = Santa Clara County; LB = City of Los Banos

MCo = Merced County

SSSC = side street stop controlled

AWSC = all-way stop controlled

Alts = alternatives

TBD = to be determined

MOWF = maintenance of way facility

Ext. = Extension

--- = Intersection does not exist

Whole intersection average delay reported for signalized intersections. Whole intersection average delay and worst approach delay (in parentheses) reported for unsignalized intersections.

Entries **bolded with an asterisk (*)** identify locations with LOS E or F in one or both peak hours. **Shaded** entries bolded with double asterisks (**) identify locations of effects under NEPA as defined by the criteria.

SR = State Route

I = Interstate

NB = northbound

SB = southbound

EB = eastbound

WB = westbound

LOS = level of service

MOWF = maintenance of way facility

Ext. = Extension

US = U.S. Highway

--- = Intersection does not exist.

Whole intersection average delay reported for signalized intersections. Whole intersection average delay and worst approach delay (in parentheses) reported for unsignalized intersections.

Entries **bolded with an asterisk (*)** identify location experience LOS E or F in one or both peak hours.

LOS = level of service

SR = State Route

I = Interstate

NB = northbound

SB = southbound

EB = eastbound

WB = westbound

SJ = City of San Jose

CT= California Department of Transportation

CMP = Congestion Management Plan

MH = City of Morgan Hill

G = City of Gilroy

SCCo = Santa Clara County

LB = City of Los Banos

MCo = Merced County

SSSC = side street stop controlled

AWSC = all-way stop controlled

Alts = alternatives

TBD = to be determined

MOWF = maintenance of way facility

Ext. = Extension

--- = Intersection does not exist

Whole intersection average delay reported for signalized intersections. Whole intersection average delay and worst approach delay (in parentheses) reported for unsignalized intersections.

Entries **bolded with an asterisk (*)** identify locations with LOS E or F in one or both peak hours. **Shaded** entries bolded with double asterisks (**) identify locations of effects under NEPA as defined by the criteria.

I = Interstate

NB = northbound

SB = southbound

EB = eastbound

WB = westbound

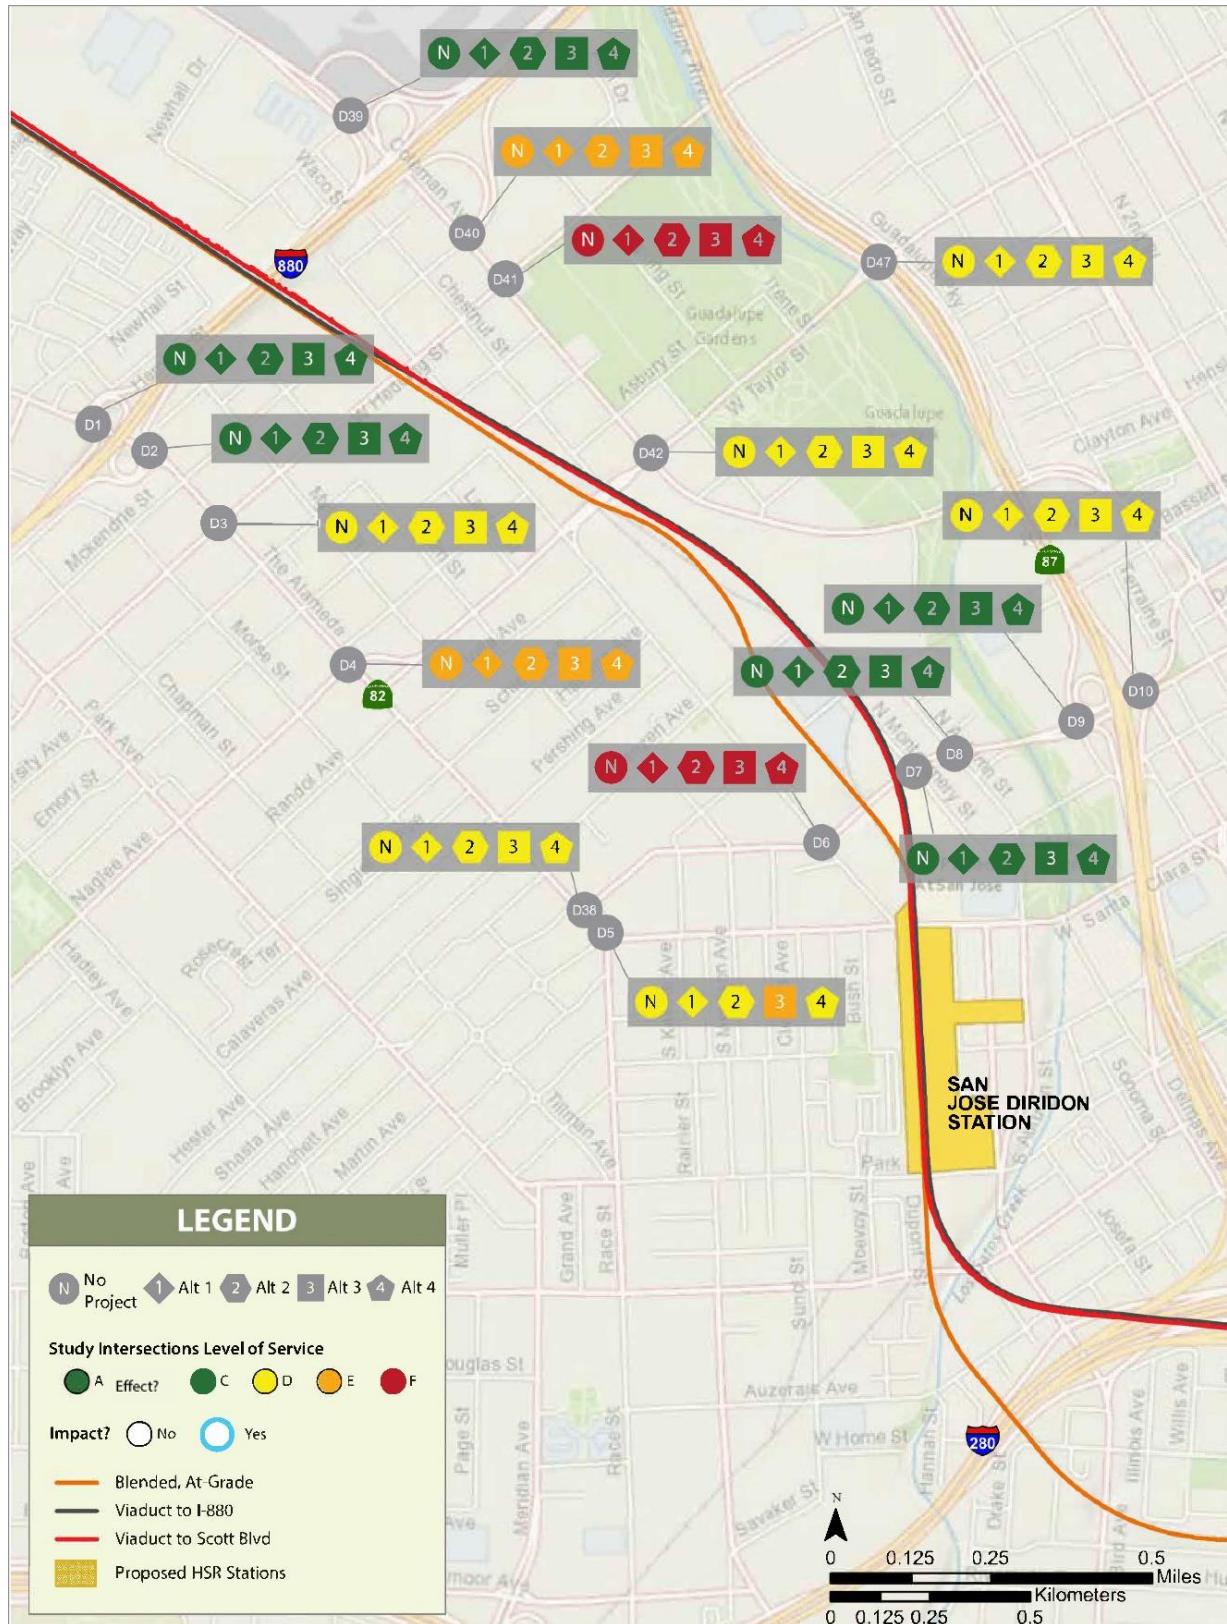

LOS = level of service

MOWF = maintenance of way facility

Ext. = Extension

US = U.S. Highway

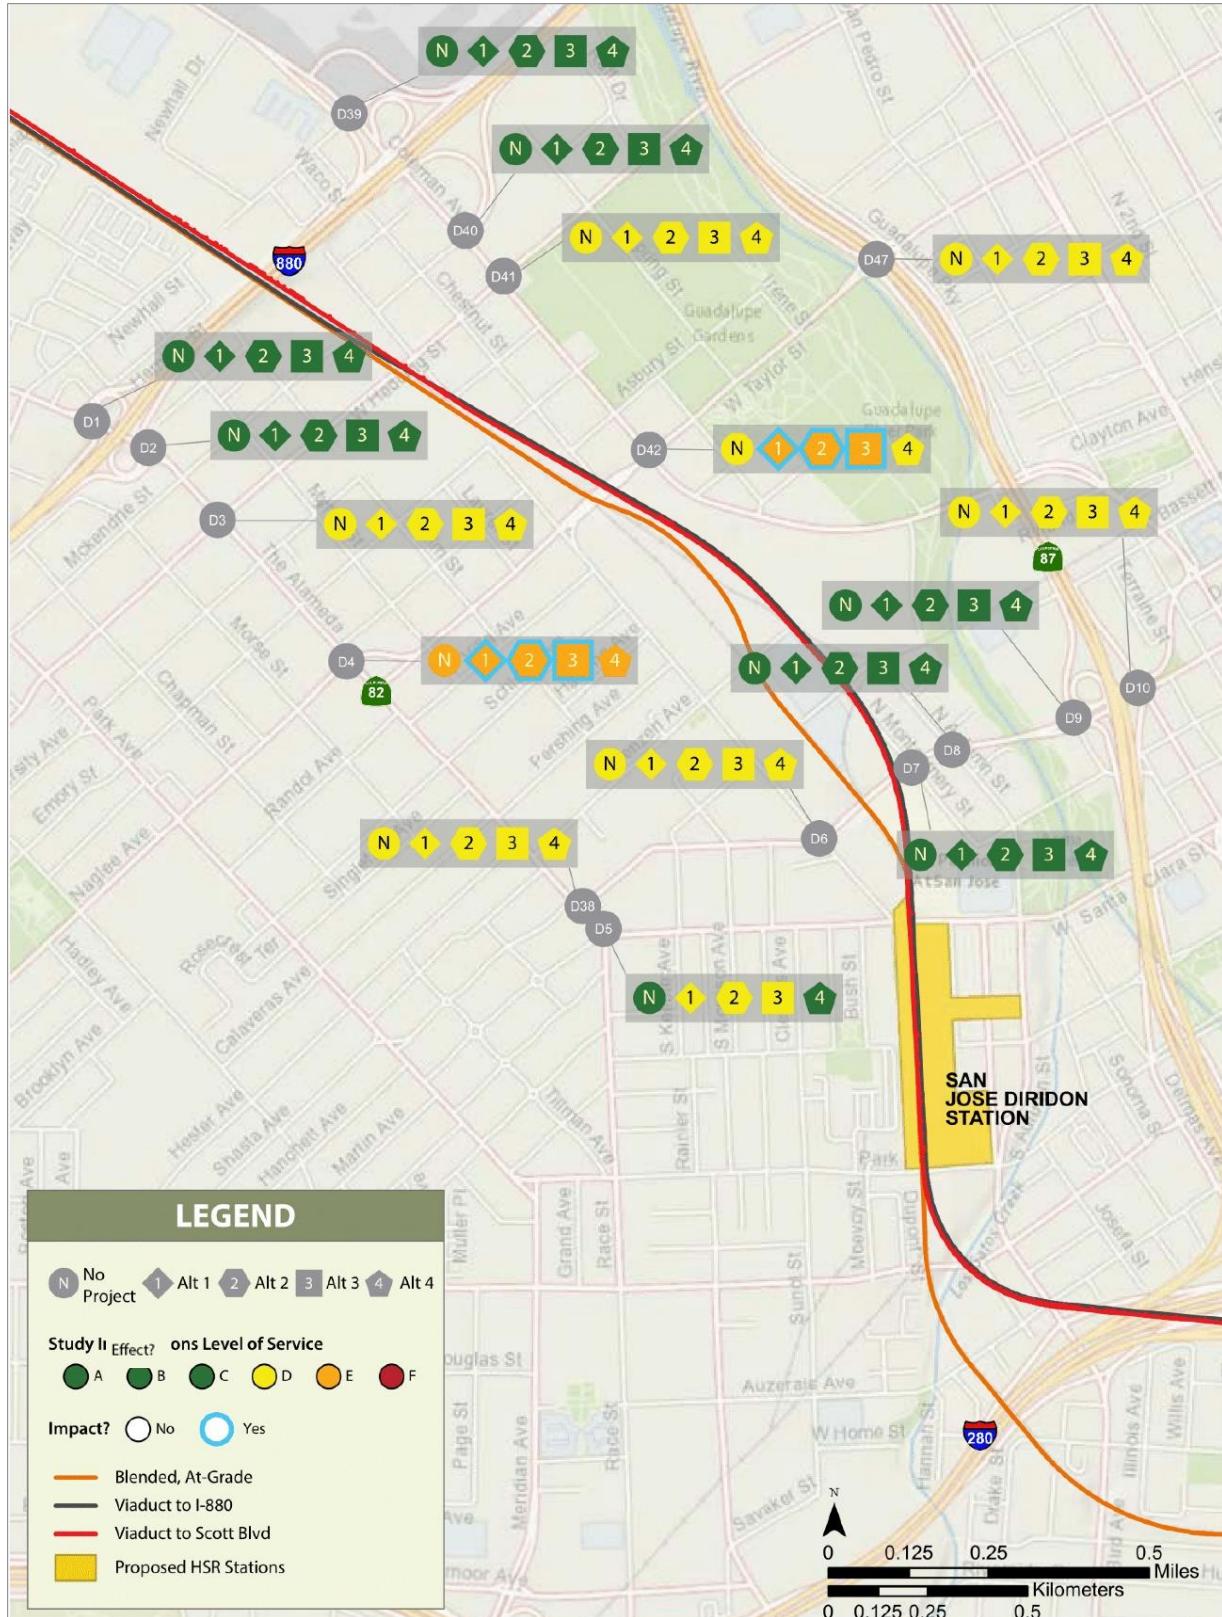

-- = Intersection does not exist

LOS A, B & C are all displayed as green because intersections experience little to average traffic delay.
